

Protective Packaging Guide

Our Protective Packaging Guide will help you choose the right packaging product. The applications highlighted on the side of the box ensure you are getting the product that will best meet your packaging needs.

AIRplus® BIO Film

- Compostable air pillows made of biodegradable material created using corn and potato starch collected from food production waste.
- Made from renewable resources
- Certified compostable according to the U.S. ASTM D6400 and European EN 13432 standards
- Triple layer, co-extruded film process supports source-reduction and enhances air bag qualities
- Runs on all AIRplus® machines

Expand your choices with Storopack's Single Source Triple Advantage!

Storopack's Triple Advantage offering from one source:

- product choices
- availability
- reliable technology

- 1 Product:** A full range of in-the-box packing materials and equipment for solutions that satisfy every need.
- 2 Geography:** More than 20 manufacturing facilities in North America and more than 50 combined locations worldwide for fast, attentive service and delivery.
- 3 Technology:** Cost-effective, efficient and environmentally friendly product technology. The latest technology for reliability, speed and ergonomics.

More solutions from one source.

Air-cushioning made of bio-film

The AIRplus® cushioning system

from Storopack is being

extended to include a bio-plastic material quality.

The compostable film is

designed to run on all

of our machines in the

series, giving great variation

on the types of applications it

is suitable for. The filling and

padding material can be used throughout

all service departments, from small dispatch

rooms to the automated distribution centre.

Our Protective Packaging Guide recommends this product for:

- ✓ Cushion
- ✓ Void-Fill
- ✓ Block & Brace

AIRplus® BIO by STOROPACK

The composting ability of AIRplus® Bio Film is certified according to the European standard EN 13432 and the American Norm ASTM D6400. The air cushions are marked with the seedling logo ensuring the recipient is aware of the shipping company's ethos of sustainability.

European
Certification
EN 13432

U.S.
Certification
ASTM D6400

The raw material is a biologically degradable plastic compound based on polylactic acid (PLA) with co-polyester.

As with polyethylene based films, Storopack co-extrudes the polymer during processing to produce a three-layered structure. Compared with mono-extruded films, this reduces material consumption, the elasticity is increased and the low permeability ensures that the air fill does not shrink.

AIRplus® BIO film air cushions are currently available in two sizes: 100 x 200mm and 200 x 200mm.

AIRplus® BIO film 100 x 200mm

AIRplus® BIO film 200 x 200mm

Storopack is following a fundamental approach designed to associate the term bio-plastic with two characteristics. First, the functionality - the plastic product is compostable. And secondly, the basic raw material - the product is made of a renewable raw material. Both conditions are met with AIRplus® Bio Film.
