

## Your advantages on first view:

- Electrostatic dissipating film
- Developed and manufactured in house
- Complies with DIN EN 61340-5-1
- “on-demand” packaging material
- A variety of cushion sizes are available

## Close to the customer throughout the world

National markets - despite globalisation - have different requirements and needs. In order to satisfy them and to be as close as possible to the customer, the Storopack Group is positioned locally – the national representatives act autonomously, self reliantly, quickly and flexibly.

# AIRplus® ESD Film

NEW FROM  
STOROPACK!

  
**STOROPack**

# Filling and padding according to the ESD norm

The air-cushioning material AIRplus® from Storopack is now available in an ESD film version for the protective packaging of electronic components. The film complies with the requirements of DIN EN 61340-5-1 for electrostatic dissipating materials. It has been developed by Storopack and is now delivered from our own production sites.

The more complex and more miniaturised active electronic components become, the more sensitive they are to electrostatic discharge, abbreviated ESD. High potential differences arise when two surfaces rub together, e.g. these can build up simply by walking over a carpet or when handling packaging.

## The ESD film is available in the following air cushion lines:

AIRplus® Void Film

AIRplus® Bubble Film

## Which film for which packaging application?

This convenient guide is shown throughout our catalogue to help you choose the right AIRplus® product. The functions highlighted on the side of the box ensure you're getting the product that will meet your packaging needs.

Packaging functions for **Void Film**:

- ✓ Cushion
- ✓ Void-Fill
- ✓ Block & Brace

Packaging functions for **Bubble Film**:

- ✓ Cushion
- ✓ Wrap
