

Your benefits at a glance:

- Increased productivity when wrapping your products
- Alternative application to pre-inflated bubble film
- Cost reductions through storage and handling
- Quality Perforation - Smart Tear Off:

This allows the packer to divide and tear off the cushioning wrap intuitively in one move, without having to search for the perforation.

Flexible protective packaging solutions from Storopack

With a view to continuously improving the productivity of the protective packaging process, Storopack is looking at four protective packaging solutions:

- 1) "in-the-box": the best and most effective protection in a box
- 2) "into-the-box": the most efficient and ergonomic way of placing the protective packaging into a box
- 3) "around-the-box": the physical and digital integration of the protective packaging process into intra-logistics, taking account of a requirement-orientated automation solution
- 4) "out-of-the-box": the positive unpacking experience

The appropriate key questions (chart) capitalise on all the relevant resources. This holistic approach is part of an on-going process, and leads to the comprehensive and continuous optimisation of the customer's protective packaging process – with "Perfect Protective Packaging" being the aim.

AIRplus[®] Bubble Film

NEW FROM
STOROPACK!

Increased productivity for wrapping with air cushions

AIRplus® Bubble by Storopack is an on demand protective air cushion packaging designed for the wrapping of products. As an alternative to off-the-shelf bubble film, the on-demand system minimises costs for storage and handling.

Manufactured on compact machines, AIRplus® Bubble is set up as an individually integrated and productive protective packaging solution. In keeping with Storopack's "Working Comfort" concept, the packaging material includes a convenient smart-tear-off perforation for ergonomics and speed. This allows the packer to divide the cushioning wrap intuitively without searching for the perforation.

AIRplus® Bubble offers narrow individual sections for the efficient wrapping of small-sized items. From mobile phones to pharmaceutical packaging, the appropriately sized packing material prevents waste of protective packaging. A single section (approx. 360mm x 130mm x 20mm) contains four separate rows with a total of 29 air chambers within each segment.

As a supplier with its own development and production, Storopack has equipped the new air cushion product with a design advantage: the air chamber layout ensures maximum use of the wrap.

Compared to conventional bubble film, AIRplus® Bubble also offers advantages for the recipient. With one cut, the air escapes leaving only a small amount of film for disposal.

Storopack's AIRplus® Bubble is available in the tried and tested proven three-layer CX film quality.

Protection function of AIRplus® Bubble Cushions:

- Wrapping
